

AETHERIC ENGINEERING

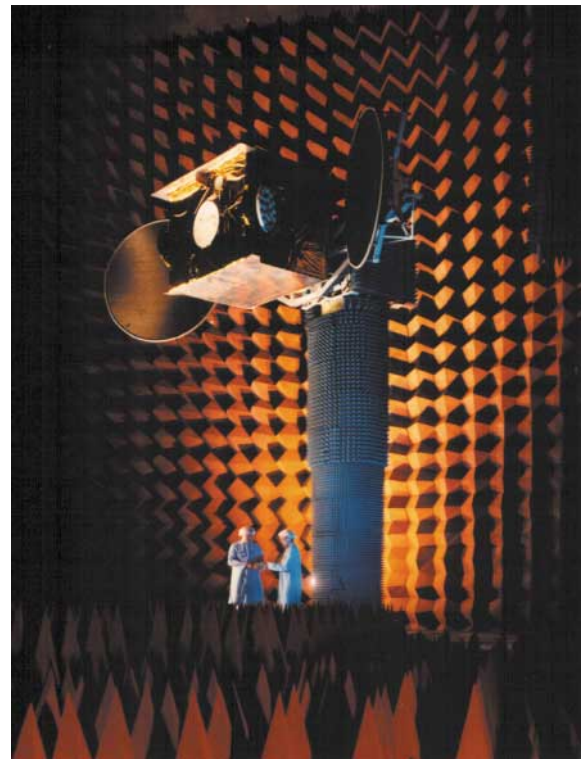

Global
Telecommunications
Consultancy

SATELLITE TECHNOLOGY

Support is provided in the design, procurement, installation, testing and commissioning of satellites and satellite operations systems. The company can provide a broad range of expertise, covering all areas of modern satellite communications, having been involved in many projects requiring both space and ground segment engineering expertise.

Aetheric Engineering provides support and assistance during all phases of the design, procurement, commissioning and operation of satellites, including satellite control centres

and ground stations, in-orbit test systems and the data and voice networks linking those centres and systems. In addition, our consultants have worked with both spin stabilised and 3-axis stabilised satellite designs, from several manufacturers. Our consultants have supported satellite operations from the formation of the client's operations team and implementation of the facility, through certification of operators and facility commissioning, to ongoing satellite operations.

The company is located close to major UK satellite manufacturing sites. The remaining European and US manufacturers are all within easy reach. The creation and support of field offices, for the monitoring of the design, construction and testing of satellites is an established part of the company's expertise.
