## TELECOMMUNICATIONS

Support is provided in the design, procurement, installation, testing and commissioning of both public and private telecommunications networks, with an emphasis on networks using satellite communications. Aetheric Engineering's support is available for the enhancement of existing facilities and networks, or for the implementation of complete networks.

Business planning support can be provided on the basis of either an individual project or a complete business, including initial design studies and feasibility studies.

Technology development studies

and projects can be managed on a client's behalf, where capability enhancements are a prerequisite for a successful business case.

Aetheric Engineering provides support and assistance during all phases of the design, procurement, commissioning and operation of satellite communications and related systems, supporting earth station technology, network control centres, and data and voice networks. Our consultants have experience of working with all sizes of earth station, from VSAT to large trunk and hub stations, and of working with all sizes of network, from national to corporate.
